ABSTRACT

Title II of the Elementary and Secondary Education 3 Act of 1965 (ESEA Title II) provides direct federal assistance for the acquisition of school library resources, textbooks, and other instructional materials. It is a state plan program: the state plan is the contract/agreement which the U.S. Office of Education negotiates with a state or eligible outlying area for the operation of a program designed to acquire materials for use by public and private elementary and secondary school children and teachers. Funds are allotted to each state on the basis of the proportion of z students, from the total in all the states, it has enrolled in its schools. The first annual report of ESEA Title II programs describes how the fifty states, the District of Columbia, Guam, Puerto Rico, the Trust Territory of the Pacific Islands, and the Virgin Islands utilized their funds in FY 1966, when \$1,00 million was appropriated. Areas covered in the report include state plans approved, children and teachers participating, funds expended, instructional materials made available, and state and local educational programs. strengthened; state programs for strengthening instruction through improved resources, demonstration centers, and special-purpose grants are also described. Eighteen tables present data on materials and their related costs, broken down by region, state or area, and per student per state. Supplementary tabulated data on audiovisual materials acquired under the 1966 programs are appended. (Author/JD).

Reproductions supplied by EDRS are the best that can be made from the original document.

I. INTRODUCTION

THIS IS THE FIRST ANNUAL REPORT of programs under Title II of the Elementary and Secondary Education Act of 1965. TSEA THE II provided, for the first time, direct Federal assistance for the and sition of school library resources, textbooks and other instruction materials. By this act or the Congress of the Inited States made possible the rectification of nation ide deficiency in library and their instructional resources for pup is and teachers in public and provide elementary and secondary schools he appropriation for fiscal year 1966 was \$100 million.

signed into law by liming Johnson in April 1965 and funded by Congress the following pepter. The Committee on Labor and Welfere summed up the reasons which is appear the writing and passing of Title II of the Act in its report:

The Commit a believes not only that there is widespread lack of lary resources, textbooks, and other astructional materials in our elementary and secondary schools, but is a convinced of the serious consequence to our educational program in the event there is a failure to fill the need.

Title II course Elementary and Secondary Education Act of 1965 is a State plan program. The State plan is the contract or agreement which the U.S. Office of Education negotiates with a State or engible outlying area for the operation of a program designed to acquire school library resources, tex books, and other instructional materials for use by public and private elementary and secondary school children and machers. Funds were allotted to each tate on the basis of the total number of children enrolled in its public and private elementary schools in relation to the total number of children enrolled in such schools in all the States.

Materials were made available within the State on the basis of the relative need of children and teachers for school library resources textbooks, and other instruct and materials.

This report of the first year of Title II describes now the 50 States, the District of Columbia, Guam, Puerto Rico, the Trust Territory of the Pacific Island. and the Virgin Islands utilized Title II funds in fiscal year 1966, for the improvement of educational quality through increased instructional to ources. Some of the highlights of the program follow:

State Plans Approved

1. The 50 States the District of Columbia, Guam, Puerto Rico, the Trust Territory of the Pacific Islands, and the Virgin Islands participated in the ESEA Title _I program.

Elementary and secondary Education Act of 1965: Senate Report No. 1464 Washington: U. Government Printing Office, 1965. p. 21.

2. State plans were submitted and approved from September 1965 to May 1966. Only American Samoa did not submit a State plan and its allotment of \$22,200 was regallocted to Puerto Rico and the Virgin Islands.

Children and Teachers Participating

- 1. A total of a million public and private school children participated in the program. They represented 94 percent of the 46.2 million children eligible participate and 89 percent of all children enrolled in public and private elementary and secondary schools.
- 2. The 37.7 mi public school children who perticipated were enrolled in 87 per sent of the 86,00% public schools in which children and teachers were eliminate to receive the II benefits.
- 3. The 5.7 mil_1000 private school children who participated were enrolled in 89 percent of the 18,000 private schools in which children and teachers were eligible to receive Title II benefits.
- 4. The larger percentage of elementary (94%) than secondary school pupils (93.1%) participating in the program may be accounted for by the higher priority given elementary school pupils in some State Title II programs.
- 5. Of all public and private elementary and secondary school teachers, 1.7 million, or approximately 39 percent, participated in the Title II program.

Funds Expended

- 1. Of the \$100 million appropriated, the total reported expenditure was \$97.3 million. Financial reports have not been finally settled for 22 States and 3 outlying areas.
- 2. For acquisitions under approved projects in all categories State departments of education reported an expensiture of nearly \$95.3 million.
 - 3. The amount reported for State administration is almost \$2 million.
- 4. Expenditure of \$4.1 million was reported for processing, cataloging, and delivering services, or about 18 cents per item.
- 5. The average expenditure per elementary school pupil for school library resources in 1965 was \$2.70. With the addition of ESEA Title II funds, this amount was increased to an average of \$5.00 in 1966, a rise of 85 percent. The increase in average expenditure over the same period for similar materials for secondary school pupils was from \$3.72 to \$6.42, up 73 percent.

Instructional Materials Made Available

1. Among the 3 categories of eligible materials -- school library resources, textbooks, and other instructional materials -- most of the State &

plans/ game highest priority to school library resources because of critical need for these materials, articularly at the elementary school level.

- 2. The amount expended for school library resources was \$77.5 millton, or about 90 percent of the entire amount expended for acquisitions.
- 7-3- The amount expended for other instructional materials was \$5.3 million
 - 4. Approximately \$3 million was expended for textbooks.
- 5. For pooks in all catemories, including textbooks, the amount reported are expended represents 78 percent of the total amount spent for acquisitions.
- 6. Aud ovisual materials comprised 19 percent of the acquisitions in all categories.

State and Local Educational Programs Strengthened

- 1. A to al of 285 administrative, supervisory, clerical, and other positions in full-time equivalents was assigned by the 50 States, the District of Columbia, and the 4 outlying areas, to administer ESEA Title II programs in State departments of education.
- 2. Amout 3,378 public lementary school libraries were established as a result of ESEA Title II serving 1.3 million public school pupils.

 New librarges were established in 259 secondary public schools to serve 144,77 public school pupils.

These dewly established libraries and the expansion of 61,923 existing public shoul library collections serving 22.7 million pupils also served 3.1 mullion private school pupils through the loans of materials.

- 3. Under SEA Tit II, many States have begun to develop or revise standards f. school library resources, textbooks, and other instructional materials.
- 4. Inservice education programs on the selection and utilization of materials in instructional programs have been provided for teachers, librarians, and school administrators.
- 5. Programs funded under ESEA Title II were coordinated with other Federal programs, particularly ESEA Title I and Title III of the National Defense Education Act (NDEA) of 1958.
- 6. A number of States included in their relative need formulas, provision for a limited number of model public school libraries or instructional materials centers to demonstrate good instructional materials practices, or for a limited number of special purpose grants to provide instructional materials for the use of children and teachers in special instructional programs. More than 150 special projects were funded in 17 States, with expenditures for the materials acquired totaling an estimated \$5 million.

II., BASIC FACTS ABOUT ESEA TITLE II

State Participation in the ESEA Title II Program

The 50 States, the District of Columbia, Guam, Puerto Rico, the Trust Territory of the Pacific Islands, and the Virgin Islands participated in the ESEA Title II program. Only American Samoa did not submit a plan as required; its grant of \$22,200 was reallocated to Puerto Rico and the Virgin Islands. Table 1 shows the amounts granted to the States, the District of Columbia, and the outlying areas under ESEA, Title II, in fiscal year 1966.

Title II, ESEA State plans were submitted and approved from September 1965 to May 1966. Dates of approval and effective dates of approved plans are shown in Table 2. Because 43 State plans were approved after January 1, 1966, the ordering and delivery of materials in some States occurred late in the fiscal year, and the full impact of the program cannot be assessed until the next fiscal year.

Components of the Program

The Title II program consists of two basic components - acquisition and administration. The acquisition program includes the purchase, lease-purchase, or straight lease of school library resources, textbooks, and other instructional materials. It also includes the necessary costs of ordering, processing, and cataloging such materials and delivery of them to the initial place at which they are made available for use. In fiscal year 1966, ordering was not an allowable cost in the acquisition program. Administration includes those executive, supervisory, and management responsibilities vested in the State agency and necessary to carry out State plans, such as:

- 1. Development of short- and long-term policy for making school library resources, textbooks, and other instructional materials available for the use of children and teachers in the elementary and secondary schools of a State
- 2. Development, revision, dissemination, and evaluation of standards relating to the selection, acquisition, and use of instructional materials

^{1/} The term "State" means, in addition to the several States in the Union, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, Guam, the Trust Territory of the Pacific Islands, and the Virgin Islands.

- 3. State supervisory services and evaluation of programs for the acquisition of instructional materials
- Inventorying of acquisitions made under Title II of the act and maintaining of other requisite records.
- 5. Rendering of necessary reports

Five percent of the total amount of the projects approved by the State agencies under Title II was allowed for administration of the State plans in fiscal year 1966.

Utilization of Funds

Table 3 provides the data on expenditures for the ESEA Title II program showing for those acquisitions under approved local education agency. projects, the amount spent for State administration and total expenditures. Of the \$100 million appropriated, the total of reported expenditures is nearly \$97.3 million. Financial reports have not been finally settled for 22 States and 3 outlying areas. The difference in the amounts allocated to the States under the ESEA Title II program and the reported total expenditures is small. Only 2 the States report it tal expenditures which differ from the allocation by as much as \$100,000:

For acquisitions under approved projects, State departments of education reported expenditures of almost \$95.1 million. This includes the \$4.1 million reported for processing, cataloging, and delivery. The amount reported for State administration is nearly \$2 million, or considerably less than the amount actually available. One State--Vermont, also the Trust Territory of the Pacific Islands, and the Virgin Islands reported no expenditures for administration, and a number of other States used a negligible amount for this purpose---Alaska, Kentucky, Maine, and South Dakota, as examples. The small amount actually used for State administration in relation to that actually available can probably be accounted for by the fact that many State plans were approved late in fiscal year 1966 (Table 2). Of significance also is the fact that the 5 percent available for administration was, in many States, such a small amount that it was not sufficient for even one professional worker's salary and State departments of education preferred to use the funds for acquisition. For example, 5 percent of the allocation for Alaska amounted to \$5,942. It should also be noted that certain expenditures in the administration of ESEA Title II could be covered in other Federal programs, for example, ESEAATitle V and NDEA Title III.

Categories of Acquisitions

Among the three-categories of instructional materials eligible under ESEA Title II—school library resources, textbooks, and other instructional materials—most of the plans gave priority to school library resources. In fact, 45 States allowed 50 percent or more of their allotment to this category.

School library resources are books, periodicals, documents, pamphlets, photographs, reproductions, pictorial or graphic works, musical scores, maps, charts, globes, and sound recordings, including but not limited to those on disc or tape; processed slides, transparencies, films, filmstrips, kinescopes, and video tapes, or any other printed and published or audiovisual material of a similar nature made by any method now developed or hereafter to be developed, which are processed and organized for the use of elementary or secondary school children and teachers.

The term "textbooks" means books, reusable workbooks, or manuals, whether bound or in looseleaf form, intended for use as a principal source of study material for a given class or group of students, a copy of which is expected to be available for the individual use of each pupil in such class or group. "Other instructional materials" are the same as those listed as school library resources, but are not processed and organized for the use of elementary or secondary school children and teachers.

Table 4 summarizes the proportions allotted by the States to the three categories of materials in fiscal year 1966. Justifying their emphasis on school library resources in State plans, the State departments of education explained the low priority for textbooks on the basis that they were in more adequate supply than school library resources and other instructional materials.

Children - Program Participation. - Table 5 provides data on the number of children and teachers participating in the ESEA Title II program. Of the 46.2 million public and private school children eligible to participate in the program, 43.4 million--or 94 percent--did participate in fiscal year 1966. Not all public and private school children in the United States are included in column 4 of Table 5, ADM or ADA in Eligible Agencies. State departments of education reported only the children enrolled in eligible schools, i.e., those which provided elementary or secondary education as determined under State law, not beyond grade 12, and which comply with the State compulsory attendance laws, or recognized by some other procedure customarily used in the State. Schools, of course, must be in compliance with the Civil Rights Act of 1965. The percent of children participating in the program in relation to the total enrollment in elementary and secondary public and private schools is 89.

A number of reasons account for the fact that there was not 100 percent participation in the Title II program. Materials are distributed on the basis of relative need, and some children and teachers in schools already well provided with materials were not served in the first year of the program. Some public and private school administrators decided against participation because they did not wish their schools to receive Federal aid. Some children and teachers in schools not in compliance with Title VI of the Civil Rights Act could not be served.

Total	49	55	49

Six States made no categorical breakdown between school library resources and other instructional materials.

2:

The number of elementary school pupils who participated in the program, 28 million, is about 94 percent of the 29.8 million eligible elementary school pupils in public and private schools. For secondary school pupils, the 15 million participants comprised 93.1 percent of the eligible number of secondary school pupils in public and private schools. The fact that a larger number of elementary school pupils than secondary were served is mainly due to the larger total number of elementary school pupils. However, the fact that a somewhat higher percentage of elementary than secondary school pupils participated in the program may be accounted for by the higher priority given elementary school pupils in some State Title II programs - Kansas and Onio, for example.

Children in Public and Private Schools. - Of 40.3 million public school children eligible to receive benefits in the Title II program, 37.7 million, or 93.4 percent, actually participated in fiscal year 1066. These children were enrolled in 87 percent of the 86,279 public schools in which children and teachers were eligible to receive Title II benefits. For private school children, the number participating was 5.7 million, or 97.2 percent of the total eligibility. The private school children participating were enrolled in 89 percent of the 17,702 private schools in which children and teachers were entitled to receive Title II benefits.

Children in Rublic Schools, by Region and State. 2/- There is some variation among the regions in the percentage of eligible public school children who participated in the ESEA Title II program. The percent of eligible public school children participating ranged from 84.4 in Region. VI (Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota) to 96.3 in Region IX (Alaska, Arizona. California, Hawaii, Nevada, Oregon, Washington, Cuam, and the Trust Territory of the Pacific Islands). 4/ (Table 6)

Children in Private Schools, by Region and State. - The variation among the regions in the percent of eligible private school children who participated in ESEA Title II ranges from 82.9 in Region VI (Iowa, Kansas, Minnesota, Missouri, Nebraska. North Dakota, and South Dakota) to 98.7 in Region III (District of Columbia, Kentucky, Maryland, North Carolina, Virginia, West Virginia, Puerto Rico, and the Virgin Islands). (Table 6) Again, the relative need formula in Kansas may account in part for the lower percentage of eligible children who participated in Region VI however, complete data are not reported for 3 States - Iowa, Missouri, and South Dakota. In Region III, Kentucky, the Virgin Islands, Virginia, and West Virginia reported that all private school children eligible to participate in the program actually did participate.

⊧/ Excludes American Samoa.

^{2/} States comprising each recommand in Table 6.
3/ Excludes Iowa because on the total number of children who participated was reported.

The variation among the States in the percentage of private school, children who participated in the ESEA Title II program ranges from 51.4 percent in Kansas to 100 percent in 9 States -- Alabama, Alaska, California, Florida, Kentucky, Louisiana, New Hampshire, Virginia, West Virginia, and the Trust Territory of the Pacific Islands and the Virgin Islands. Six of these States -- Alabama, Florida, Hawaii, New Hampshire, Virginia, and West Virginia, and the Trust Territory of the Pacific Islands also reported 100 percent participation of eligible public school children.

Teachers - Table 5 shows that 1.7 million teachers, or approximately so percent of all eligible teachers in the Nation, participated in the Title II program. The number as reported by the State departments of education represents the teachers in those public and private schools whose pupils had the use of school library resources, or textbooks, or other instructional materials. The figure does not represent the number of teachers who had the use of professional materials (books, periodicals, curriculum guides) which were provided to some degree by Title II. However, the resources made available in the schools for the use of pupils obviously are of value to teachers in their programs of instruction.

State Administration Personnel. - Table 7 provides data on the number of administrative, supervisory, clerical, and other positions assigned by the 50 States, the District of Columbia, and the 4 outlying areas to administer ESEA Title II programs in State departments of education. A total of 285 positions in full-time equivalents was reported.

In examining Table 7, it should be noted that column 4 refers to positions in full-time equivalents, not individuals. For example, there were only 31 relatine positions in administration, but there were actually. 97 individuals resignated as administrators who had some responsibility in administering Title II programs. This difference means that there were 66 administrators who had responsibilities in addition to Title II.

There were 47 administrative positions in full-time equivalents, accounting for 17 percent of total staff time. Of total staff involved in the ESEA Title II program, 23 percent, or 80.8 positions in full-time equivalents, were designated as supervisors—school library supervisors and curriculum and subject specialists, as examples. Only 67 full-time supervisory positions were assigned to the Title II program, but 154 individuals in supervisory positions had some responsibility in the program.

There were 29.6 positions in full-time equivalents other than administrative, supervisory, and clerical and secretarial personnel employed in the Title II program, accounting for 10 percent of the total staff time. These positions accounted for such personnel as consultants, fiscal and statistical personnel, and nonprofessional employees, such as truck drivers and technicians, who do not fall into the category of secretarial and clerical staff.

Other staff	17	90	12.59	29.59		

Categories of Acquisitions

Table 8 provides data on the number and cost of the instructional materials in each of the three categories provided for loan to public and private school pupils and teachers under the ESEA Title II program in fiscal year 1966. The amount expended for school library resources is \$77.5 million, or 90 percent of the entire amount expended for acquisitions. The amount expended for other instructional materials was \$5.3 million, or 6 percent of the total amount expended for acquisitions. Textbooks account for the remaining 4 percent of the amount expended for acquisitions—nearly \$3 million dollars. These percentages reflect the priorities applied to the three categories, and the great emphasis placed on school library resources by the 50 States, the District of Columbia, and the outlying areas participating in ESEA, Title II programs in fiscal year 1966.

Data on the instructional materials in each of the three categories provided for loan to public and private school pupils and teachers under the ESEA Title II program, fiscal year 1966, by region and State are provided in Table 9. The percent of total items purchased in the school library resources category ranged from 73.8 percent in Region III (District of Columbia, Kentucky, Maryland, North Carolina, Virginia, West Virginia, Puerto Rico, and the Virgin Islands) to 97.0 percent in Region IX (Alaska, Arizona, California, Hawaii, Nevada, Oregon, Washington, Guam, and the Trust Territory of the Pacific Islands). Two States in Region IX (Hawaii and Nevada) and Guam purchased school library resources only, under the ESEA Title II program in fiscal year 1966.

The variation by region in the textbook category is from less than 1 percent in Region IX to 23.4 percent in Region III. The variation by region in the other instructional materials category is from 2 percent in Region IV (Alabama, Florida, Georgia, Mississippi, South Carolina, and Tennessee) to somewhat more than 16 percent in Region VII (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas). The variations by State and region in allegategories reflect local education agency priority of needs within the priorities assigned to the three categories by the State departments of education.

School Library Resources. - School library resources accounted for 90.3 percent of the \$74 million expended for instructional materials loaned to public school children and teachers under the ESEA Title II program in fiscal year 1966, and 90 percent of the \$11 million expended for materials for loan to the private school children and teachers, in the United States and outlying areas participating in the program. Table 8 shows the number of items acquired among types of materials defined as school library resources and other instructional materials and amounts spent for these categories. It also shows the number of textbooks acquired and the amount spent for them.

Of the \$77.5 million expended for school library resources, library books account for \$61.7 million, or about 80 percent. Table 10, column 3, shows that \$39.2 million was expended for elementary school library books, or more than 63 percent of the total amount spent for books in this category. The amount spent for secondary school library books was \$21.8 million, or about 35 percent of the amount spent for library books. The higher proportion expended for elementary school library books reflects the critical need for such materials, as well as the larger number of elementary school pupils who participated in the program. The 18 million elementary and secondary school library books represents an increase of less than one library book per pupil for the number of elementary and secondary pupils (43.4 million) participating in the ESEA Title II program. For books in all categories, including textbooks, the amount reported as expended represents 79 percent of the total amount spent for acquisitions in all categories.

Tables 3 and 11 provide data on the number and cost of audiovisual materials loaned to pupils and teachers as school library resources and other instructional materials. The total amount expended for such materials in the school library resources category is \$13.9 million, or about 18 percent of acquisitions in this category. 5/ The total amount expended for audiovisual materials in both categories is \$16.4 million, or about 19 percent of the entire amount reported as expended for acquisitions. In a number of States, reports for audiovisual materials were provided as totals rather than a breakdown of separate items. However, a large number of filmstrips, recordings, slides, and transparencies are made available as school library resources (Table 8).

Audiovisual materials comprised 19 percent of the acquisitions in all categories for fiscal 1966. Of significance is the fact that a larger percent of the other instructional materials category (47) was expended for audiovisual materials than in the school library resources category (18). This is probably due to the high priority placed on bringing collections of school library books up to standard. Also, in some school districts, audiovisual materials are not made available through school libraries or instructional materials centers.

38

^{5/} The number and cost of separate audiovisual items by region and State and by educational level may be found in Tables A-D in the Appendix.

^{1/} Detail does not add to totals given in Table 8 since some States reported only totals rather than individual items.

The number of audiovisual items in both categories reported purchased for loan to elementary school pupils is 1.2 million items (Table 11). A smaller number, 759,775 audiovisual items, was reported to be available for loan to secondary school pupils and teachers in fiscal 1966 under ESEA Title II programs. Again, this may be accounted for by the high priority of need given to pupils and teachers in elementary schools in some States.

In 8 States, the number of audiovisual items were reported as totals rather than as individual items. However, in 42 States, the District of Columbia, and the 4 outlying areas, filmstrips, slides, and transparencies accounted for about 53 percent of all audiovisual items provided in the program. The number of motion pictures reported purchased in both the school library and other instructional materials categories is considerably less than for any other type of audiovisual material. This is probably due to the high cost of motion pictures in relation to the cost of other audiovisual items.

In the school library resources category, periodicals and other printed matter such as documents and pamphlets represented an expenditure of only \$1.7 million, or about 2 percent of the \$77.5 million total expended for school library resources.

Textbooks. - Textbooks accounted for about 3.4 percent (\$2.9 million) of the total amount expended for acquisitions under the ESEA Title II program in fiscal year 1966. This expenditure made approximately 1.2 million textbooks available on a loan basis to children and teachers in public and private elementary and secondary schools. The amount expended is almost evenly divided between textbooks for loan to elementary school pupils and textbooks for loan to secondary school pupils. The larger number of textbooks provided for loan to secondary school pupils than elementary school pupils may be partly accounted for by the possibility that large numbers of paperback textbooks may have been purchased for loan to secondary school pupils. The larger amount expended for textbooks to be loaned to public school children and teachers, of course, reflects the larger total number of public school pupils than private school pupils.

The number of textbooks (1.2 million) provided is exceedingly small in relation to the number of pupils (43.4 million) who participated in the ESEA Title II program; however, 29 States did not use ESEA Title II funds for textbooks in fiscal 1966 and all but one of the remaining States and outlying areas limited the acquisition of textbooks in the program sharply because of other more critical needs (Table 4).

Other Instructional Materials. - The total amount, as reported by State departments of education, expended in the category of other instructional materials was \$5.3 million, or about 6 percent of the total amount expended for acquisitions. Other instructional materials are defined as the same items as school library resources except that they are not processed and cataloged for use. The low proportion of funds expended for other instructional materials in relation to school library resources is explained by the fact that the number of schools with centralized libraries has risen steadily. School library resources were also made available to many children and teachers in schools without centralized libraries in order to increase the accessibility and availability of materials. Books account for \$2.2 million, or 42 percent of the total reported as expended for other instructional materials. For audiovisual materials in this category, the total reported was \$2.5 million; or about 47 percent. The amount expended for periodicals and other printed materials amounted to about 8 percent of the other instructional materials category.

Table 12 provides data on expenditures for books and audiovisual resources and number of items provided under the ESEA Title II program in fiscal year 1966, as school library resources and other instructional materials, by region and State. The tendency of the States to expend considerably larger amounts for books than audiovisual materials has already been noted. In fiscal year 1966, the entire ESEA Title II allotment to Montana and Vermont, except for administrative funds, was expended for library books. Other States expending an exceptionally large amount of the total allotment for library books were Georgia, Mississippi, Pennsylvania, South Carolina, and Tennessee, as well as Guam.

In 15 States, the Trust Territory of the Pacific Islands, and the Virgin Islands, audiovisual materials were purchased as school library resources only. Of audiovisual materials in both categories, 6 States—Alaska, Hawaii, Iowa, Nevada, New Hampshire, and Utah—expended a fairly large proportion of their total allotment for such materials.

Processing, Cataloging, and Delivering

The acquisitions program under ESEA Title II includes the necessary costs of processing and cataloging school library resources, textbooks, and other instructional materials and delivery of them to the initial place at which they are made available for use. The ESEA Title II State plans describe the processing, cataloging, and delivery services, performed either by a commercial concern or public agency, which the State agency administering the plan will allow as a part of the cost of acquisition. The State plan also establishes a true and just cost for such ordering, essential for making the benefits of Title II available for the use of children and teachers in the State.

In fiscal 1966, State departments of education reported expenditures of \$\text{1.1}\$ million for processing, cataloging, and delivering services (Table 13). This represents about 4 percent of the acquisition expenditures and an average expenditure of about 18 cents per item for processing, cataloging, and delivering the 23 million individual items of school library resources, textbooks, and other instructional materials acquired in the program. Although no State excluded altogether costs of processing, cataloging, and delivering instructional materials, a few States reported no expenditures for this purpose in fiscal year 1966, and a very small percentage of acquisition costs for this purpose was reported in some other States. In these States, costs for processing, cataloging, and delivery of materials were absorbed by the local educational agencies and ESEA Title II funds were used to provide materials.

III. STATE PROGRAMS FOR THE STRENGTHENING OF INSTRUCTION THROUGH IMPROVED RESOURCES

Improvement of School Library Resources

Data on the number of new public school libraries established and the number of existing public school libraries expanded as a result of ESEA Title II programs are provided in Table 14. The 50 States, the District of Columbia, and the 4 outlying areas reported establishment of 3,637 new public school libraries. Of these, 3,378 were public elementary school libraries serving 1.3 million public school pupils and 259 were public secondary school libraries serving 144,774 pupils. Many elementary school libraries were established with Title I funds but the number is unknown. The larger number of new public elementary school libraries established is due to the participation of more elementary school pupils than secondary school pupils in the ESEA Title II program. Also, more elementary schools than secondary schools are without centralized libraries:

Libraries have been established in 7 percent of the estimated 47,000 public elementary schools that lacked libraries prior to 1965. Of the estimated 1,056 public secondary schools without libraries before 1965, 25 percent have now established them. With regard to the improvement of existing school libraries, 42,346 public elementary school libraries serving 13.8 million public school pupils and 19,577 public secondary school libraries, serving 8.9 million pupils were expanded. Establishment of 3,637 new public elementary and secondary school library collections and expansion of 61,923 existing public school library collections also served 3.1 million private school pupils who received loans of materials through the organization of new libraries or the improvement of existing libraries.

Maintaining and Increasing Effort

Section 117.24 of the ESEA Title II Regulations requires that State plans set forth policies and procedures to assure that funds made available under the ESEA Title II program supplement and, to the extent practical, increase the level of State, local, and private school funds made available for the acquisition of school library resources, textbooks, and other instructional materials, and in no case supplant such State, local, and private school funds. Therefore, the State agencies collected the necessary data to compare the amount of State, local, and private school funds actually expended for school library materials in the base fiscal year, 1965, with the amount of State, local, and private school funds expended in the fiscal year 1966, and reported this information to the U.S. Office of Education. In the first year of the program, information on per pupil expenditure for textbooks and other instructional materials was not requested by the U.S. Office.

Table 15 provides data on the per pupil expenditure of State, local, and private elementary school funds in fiscal years 1965 and 1966 for school library resources in the 50 States, the District of Columbia, and the outlying areas. Table 16 provides comparable data on secondary schools. The amount of increase or decrease in per pupil expenditure for school

^{1/} Under the relative need formula, secondary school pupils in only two demonstration schools participated in Fiscal Year 1966.

library materials, public and private, in each State and outlying area from 1965 to 1966 is shown in columns 4 and 7 of Tables 15 and 16. Data are not complete for all States and outlying areas. Fourteen States reported an increase from 1965 to 1966 in State, local, and private school effort to provide school library resources in both public and private elementary schools. An additional 17 States reported an increase in State and local effort during the same period to provide library resources in public elementary schools. Three other States and Guam reported an increase in private school effort to provide school library resources for the use of private school children. In some States, the increase is for public elementary and secondary schools combined, out to private elementary and secondary schools combined.

An increase in effort to provide school library resources for the use of secondary public school children from 1965 to 1966 was reported in 32 States and clam, while 16 States and Guam report similar increase in secondary private schools. The increase in effort in these States provide school library resources in both public and private schools can probably be partly attributed to the stimulation of funds from Federal sources.

Elementary Schools—In the 31 States reporting an increase in local and State effort to provide school library resources for the use of public elementary School children, the amounts of the increases range from 10 cents or less per pupil in 6 States—Alaska, Idaho, New York, North Dakota, South Carolina, and Washington—to \$1.51 per pupil in Virginia. The increase in private school effort in 17 States and Guam ranges from 10 cents or less per pupil in 6 States—Idaho, Nebraska, New York, Ohio, Tendessee, and Vermont—to \$1 per pupil in Guam.

Michigan, Tennessee, the District of Columbia, and the Virgin Islands maintained the same level of support per pupil in 1965 and 1966 for the provision of school library resources, and Louisiana, Michigan, and the District of Columbia reported no change in level of support for private school library resources.

Decreases in local and State efforts to provide school library resources in public elementary schools were reported in 5 States--Arizona, Illinois, Louisiana, Nevada, Rhode Island--and Guam. Seven States--Alaska, California, Delaware, Kansas, New Mexico, Texas, and West Virginia --reported decreases from 1965 to 1966 in private school effort to provide school library resources.

The amounts of these decreases range from 5 cents in New Mexico to \$3 in Nevada. The Title II Regulations, concerned with maintenance of effort (Section 117.24), permit a degree of flexibility and allow for normal fluctuations in State, local, and private expenditures for materials. Such fluctuations may occur when exceptionally large amounts of money are spent in one year because of unusual circumstances such as the acquisition of basic library collections in new schools.

Secondary Schools -- In the 33 States and outlying areas. reporting an increase in local and State effort to provide school library resources for

the use of public secondary school children, the amounts of the increases range from 10 cents or less per pupil in 6 States--Alaska, Idaho, North Carolina, Ohio, South Carolina, and Vermont--to \$1.73 in Tennessee. The increases in private school effort in 16 States and Guam range from 10 cents or less in Hawaii, Idaho, Indiana, New York, and Vermont to \$2.14 in Maine.

In Michigan, the District of Columbia, and the Virgin Islands the same level of support for public secondary school library resources was reported in both 1965 and 1966. No increase in effort for private secondary school library resources was reported in Louisiana, Michigan, Ohio, and the District of Columbia.

A decrease in State and local efforts to provide public secondary school pupils with library materials from 1965 to 1966 was reported in Arizona, Illinois, Louisiana, Nevada, North Dakota, and Rhode Island, the amounts of the decrease varying from 9 cents per pupil in Louisiana and North Dakota to \$3 per pupil in Nevada. A similar decrease in private school effort to provide secondary school pupils with library materials was reported in California, Delaware, Nebraska, New Mexico, Texas, and West Virginia. The amounts of the decrease vary from 2 cents per pupil in West Virginia to \$4.41 per pupil in Delaware.

Funds Expended Under Title II—Table 17 provides the per pupil expenditure of ESTA Title II funds for school library materials for the use of children in elementary and secondary schools in fiscal year 1966. Data are not complete for all States and outlying areas. Of the 47 States and outlying areas supplying the per pupil expenditure of ESEA Title II funds for school library resources, 15 States spent more per pupil for elementary than secondary school pupils, 14 States spent more per secondary than elementary school pupil, and 18 States reported spending the same amount per elementary and secondary school pupil.

The differences in per pupil expenditures under the ESEA Title II program in these States and outlying areas probably reflect the relative need formulas developed in the different States and the larger total number of elementary than secondary school pupils.

The average expenditure per elementary school pupil for school library resources in 1965 was \$2.70. With the addition of ESEA Title II funds this amount was increased to an average of \$5 in 1966, an increase of \$5 percent. The increase in average expenditure over the same perfod for similar materials for secondary school pupils was from \$3.72 to \$6.42, an increase of 73 percent.

The American Library Association standard for annual per pupil expenditure for <u>Aibrary books</u> in schools having 250 or more students is \$4 to \$6 per student. The Department of Audiovisual Instruction, National Educa-

American Association of School Librarians Standards for School Library Programs. Chicago, American Library Association, 1960. p. 83.

tion Association, recommends in its standards that not less than 1 percent of the average per pupil cost in the school unit should be spent per year per student to provide for a basic on-going audiovisual materials program. 2/ To provide an advanced audiovisual materials program, it recommends that the 1 percent figure be increased to 1.5 percent.

An expenditure of \$5--\$6.50 per student means that little more than one library book per pupil could be added yearly for the use of pupils and teachers, if the funds were spent entirely for books. The category of school library resources includes books, other printed materials, and audiovisual materials, so that an increase to \$5 per pupil for these resources does not indicate that national standards for school library books have been met.

Standards for Instructional Materials

Section 3.23 of the ESEA Title II State plans sets forth the plans and procedures for developing and revising standards for school library resources, textbooks, and other printed and published instructional materials to be made available to children and teachers in public and private elementary and secondary schools, as required by the Title II Regulations. Plans and procedures for dissemination of standards are also presented in the State plans. Standards are defined as those measures established by State departments of education or other authoritative groups which are used for making determinations of the adequacy, quality, and quantity of school library resources, textbooks, and other printed and published instructional materials.

A U.S. Office of Education survey reported in 1964 that only 3 States-Alaska, Massachusetts, and Utah--and the Virgin Islands did not have State standards for elementary or secondary school libraries. 3/ Criteria for the selection of textbooks are employed by many States; however, the number of States with standards for textbooks is not known. Existing standards for school library resources have been adapted for other instructional materials.

Under ESEA Title II, many States have begun the development or revision of standards for school library resources, textbooks, and other instructional materials. A common practice in the development or revision of

(in Elementary, Secondary, and Higher Education). Washington, D.C.,
National Education Association, Department of Audiovisual Instruction, 1966.

Quantitative Standards for Audiovisual Personnel, Equipment, and Materials (in Elementary, Secondary, and Higher Education), Washington, D.C.

Darling, Richard L. <u>Survey of School Library Standards</u>. Washington, D.C., U.S. Department of Health, Education, and Welfare, Office of Education, 1964. (OE-15048) p. 4.

standards was for the State department of education to organize a committee composed of State agency personnel, school superintendents, principals, directors of instruction, teachers, school librarians or instructional materials specialists, private school representatives, and, in some instances, lay members of the community. The following excerpts from the States' reports for fiscal year 1966 illustrate the kind of action taken:

Arizona--Arizona has made a step toward meeting American Library Association standards which were used as a basis of measurement last year. A committee has been formed to develop State standards during this year and we are involving representatives of many professional organizations...

Louisiana -- At the beginning of fiscal year 1966, the State standards for school-library services were very old and inadequate. A measure against them would not reveal need. It was immediately seen that new standards needed to be adopted. As a result, a statewide committee spent the winter and spring of 1966 working on this project. On June 8, 1966, the proposed standards were submitted to the Assistant Superintendent for Curriculum and Instruction requesting that he further submit these to the State Board of Education for approval.

Massachusetts--The Massachusetts Advisory Committee for Title II consisting of 16 members, including Department of Education personnel, was appointed by the Director, Bureau of School and Public Libraries. Membership on this Committee included school Superintendents, a principal, supervisors, audiovisual specialists, librarians, and a library school director. This Committee represented large, and and small communities, local and regional public and private schools at both elementary and secondary levels, and school and public libraries. It was the function of this Committee to assist the Bureau in the development and revision of State standards for school library resources to review administrative policy. Two subcommittees were appointed whose duty it was to develop State standards for both printed library materials and audiovisual materials. . . .

Ohio--The Ohio State Department of Education has no quantitative standards for audiovisual materials or supplementary textbooks. The school library standards for Ohio elementary schools are not quantitative. Ohio secondary school library standards are the only quantitative standards which relate to Title II funds for library books. The Division of Elementary and Secondary Education is responsible for developing standards for Ohio schools. Members from the Title II staff have been working with this division in planning a revision of standards for elementary schools. As revision of standards for the high schools and juntor high schools has been proposed. . .

A current tendency in the formulation and revision of standards for school library resources and other instructional materials is to include audiovisual materials of various kinds to indicate recognition of the role of the school library in providing many types of

materials. In California, for example, new library and audiovisual standards have been developed during the past year by the California Association of School Librarians for publication and distribution to schools. Other examples of this activity include:

Oregon--The Oregon State Board of Education . . . adopted revised Minimum Standards for Oregon Public Schools which require a considerably higher level of school library instructional media materials, organization, facilities, personnel, and program of services than had hitherto been required. . . Oregon's minimum standards for collections of audiovisual materials are not specific. The use . . . of approximately 1/3 of Title II funds for nonbook materials has a slight effect on the meeting of present State standards. . . (audiovisual materials)

Utah--Utah has been able to begin its standards for each of the three categories of materials as a result of the Title II programs. The State is using standards suggested by the American Library ** Association and Division of Audiovisual Instruction . . . The instructional Materials Center Standards Committee worked on the following problems: . . . quantitative standards for personnel; . . . quantitative standards for materials collections; . . . a new certification program for media personnel in Utah . . .

Washington-The current school library standards approved in 1960 by the Washington State Board of Education as "Recommended School Library Services and Standards" are an inadequate evaluative tool this year both because they need updating and because the quantitative materials aspects include only books and magazines. These standards are presently in the process of revision at the direction of the State Board of Education and the professional school library and audiovisual associations have undertaken jointly the writing of standards for the entire instructional resources program

Standards developed or revised under the ESEA Title II program have served the general purposes of all educational standards: to set minimum levels below which no instructional program can be effective and to encourage efforts not only to meet standards, but to go beyond them toward excellence in educational opportunity. Standards have served as factors in establishing relative need for the distribution of materials under the Title II program and have also served as measures for determining the relative need of children and teachers for items in the three categories; school library resources, textbooks, and other instructional materials.

Inservice Education

Section 3.22 of the ESEA Title II State plans describes the program of State administration, leadership, and supervision, outlining the types of services in the way of leadership and inservice education activities. The following examples show the range of inservice education activities provided under ESEA Title II:

California - Statewide information meetings on Title II launched the year's program. Smaller area meetings were held using 35 trained ad hoc consultants to reinforce the initial efforts. Nine part-time special Title II consultants worked with individual schools or districts to assist them with special problems arising as they applied for aid under Title II. St e department personnel visited many schools and districts following up requests for consultant services and conferred with them as needed to make the best use of monies requested. An especially successful series of inservice meetings was held for public and private schools in both the Los Angeles and the San Francisco areas. Countless extra hours were devoted to providing opportunities for library personnel to view and evaluate school library personnel. Private school representation was an important feature of every advisory group and every phase of inservice and consultant operation. The year closed with the pulling together of an ad hoc group to suggest workshops and inservice opportunities which might be projected for 1966-67.

Kansas-Two one-day workshops were held for 128 librarians, administrators, and certified teachers who were developing elementary libraries; a one-day workshop for school library supervisors was held, as well as two half-day workshops for audiovisual personnel ... the director of Title II and the library consultant were available to answer service calls to schools, to attend library meetings as speakers, and to confer with those needing assistance in project planning. A buying guide, a simplified processing manual, and other pamphlets were developed to aid librarians and certified teachers who were organizing central elementary collections.

Louisiana -- four regional workshops were held concerning Title II and the selection of materials . . Local school library supervisors, curriculum and subject specialists, and other personnel in local schools participated in the administration of the Title II program by conducting inservice training relative to the program, recommending quality materials, demonstrating use of materials, and being available for consultative services.

New York-- . . . five major inservice programs were conducted during FY 66. . . . The School Librarian in Relation to the Reading Teacher, New Techniques in Children's Literature, Title II and the Development of Materials Centers, Problems of Private School Librarians, The School Librarian and the Performing Arts. . . . Another major inservice activity was the planning, organization, and implementation of three 1-day workshop programs for school library and audiovisual directors on ESEA Title II and the instructional materials center concept. These workshops were conducted by the State Department of Education, utilizing outside consultants, and were attended by approximately 120 educators. The three programs were conducted in Rochester, Schenectady, and Yonkers to insure geographic spread for maximum attendance.

Texas--Inservice programs and consultative services for the Title II program were aimed primarily at small schools during fiscal year 1966.

The Migrant Project requested library and media sessions during a 3-day workshop for participating districts. Emphasis was placed on the effective utilization of materials with this specific group.

Vermont--Twelve workshops were held in the spring on reference work, cataloging, filing, and organizing a school library Much time was spent in helping to plan summer courses in library services which were held at two State colleges and the State university.

Coordination

The ESEA Title II program was coordinated with other titles of ESEA as well as a number of other programs of Federal financial assistance, in order to achieve maximum educational benefits.

The 50 States, the District of Columbia, and the 4 outlying areas reported that the most extensive coordination between other programs and ESEA Title II involved programs funded under ESEA Title I and NDEA Title III. Funds used under ESEA Title I for special education programs for educationally disadvantaged children frequently included provision for specialists in instructional materials, supporting staff, equipment, and additional instructional materials. The scope of Title I assistance in instructional materials programs is illustrated by the following examples:

In Colorado, extensive State and regional inservice programs were planned and implemented through Titles I and II.

Delaware reported that in schools where it was possible to obtain materials for improvement of reading instruction under Title I, Title II
funds were often used to strengthen resources in other areas. In one
school district it was possible to spend the entire Title II allotment
for nonprint materials because the book collections were strengthened
under Title I.

The <u>Illinois</u> report states that coordination of the Title II program with Title I was good, though at times sketchy. A great deal of consultation and discussion occurred for projects under Title I in the implementation of school library resources and other instructional materials.

Kentucky reported an increase of 114 in the total number of certificated school librarians employed in fiscal year 1966, 73 in elementary schools. This increase is the largest single increase ever shown and due largely to ESEA Title I.

ESEA Title I complemented the Title II program in Texas by providing more than \$15 million for library resources in participating schools.

In <u>Washington</u>, almost \$2.25 million was spent for facilities, equipment, staff, and materials of all kinds needed to support remedial and developmental reading programs.

In the <u>Virgin Islands</u>, funds under Title I were used to provide delivery vans for instructional materials and to employ library personnel.

The States reported coordination of NDEA Title III and ESEA Title II, particularly the use of ESEA Title II funds to provide audiovisual materials needed for using equipment acquired under NDEA Title III.

Title III of the National Defense Education Act of 1958, as amended, provides matching funds to the States for equipment and materials and minor remodeling of classrooms, laboratories, and audiovisual libraries for the elementary and secondary school subjects. State school library supervisors and subject supervisors employed in State departments of education with NDEA Title III funds on a matching basis frequently gave consultative assistance to the ESEA Title II program. The following sampling of State reports provides evidence of coordination of these programs:

California -- School districts were urged to make maximum use of all Federal and State program opportunities in planning school library programs and Title II projects . . . The application instrument for the Phase II program required a description of "any expected coordination with other Titles of ESEA and with other State and Federal programs, such as NDEA." The combination of funding from several programs was indicated as one of the priority considerations for determining pilot project libraries . . .

Florida--The Coordinator of Title II, ESEA, serves on the State Advisory Committee for NDEA and gives consultative service to the State. NDEA staff on materials. Through bulletins, conferences, and participation in programs, the Coordinator of Title II has urged the coordination of all Federal financial assistance programs which have implications for materials.

Illinois -- A great deal of coordination at the local level was accomplished with NDEA, Title III, especially where the selection of materials under the two programs were selected on a complementary basis.

North Carolina--Staff served on planning condittees to develop the State plan for Title II, using to advantage experience gained through participation in NDEA Title III State level activities. Later the NDEA Accountant and NDEA Instructional Materials Supervisor transferred to ESEA Title II. NDEA Title III and ESEA Title III staffs work cooperatively on procedures, project approval, and evaluation of both programs. NDEA Title III funds help support two offices directly integrated with Title II,

Audiovisual Education and Instructional Materials Services, and budget funds for instructional and professional materials administered through the Education Information Library and the Center for learning resources.

Rhode Island -- Under NDEA Title III, instructional materials have been added to school library and classroom collections; equipment has been purchased and minor remodeling has been done.

Utah - Developing the instructional media concept for the schools of Utah has greatly helped the coordinated effort of the Title II program and other ESEA and NDEA programs. For the first time in Utah schools, all educational materials can begin to be dispensed from a central complex. This affords all teachers and students the opportunity to use all materials in the school. The idea of shared equipment has enriched the teaching program for both adults and youth.

Under Title III ESEA, grants are provided for supplementary educational centers and services to encourage the development of innovations in educational practices through exemplary programs and to supplement existing programs and facilities. In fiscal 1966, a number of the projects funded under ESEA Title III included model school libraries and instructional materials centers and demonstrations of the use of instructional materials. For example, in Warwick, R.I., an exemplary library was emplished in an elementary school serving an area with a high concentration of children from low-income families. The program is used as a demonstration center provide inservice education for teachers, librarians, and other school personnel. In the Lubbock, Tex., Independent School District a demonstration library-learning center was established at Maedgen Elementary School, providing instructional materials services on a 12-month basis and a special summer program for children and teachers. The Union Free School District No. 22, Farmingdale, N.Y., carried out a project to produce a book catalog for three junior high school library collections by data processing. The catalogs were placed in classrooms, school libraries, and public libraries to facilitate location and use of library materials. At the Oak Park-River Forest High School, Oak Park, Ill., an information retrieval project provides students with instant access to information in several forms.

The ESEA Title V program which strengthens the ability of State departments of education to provide educational leadership, has assisted programs under Title II in many States by providing additional consultative and technical assistance in State departments of education. In Mississippi, an extensive professional library to serve the State department of education, as well as local educational agencies, was developed under Titles II and V

North Carolina reports that under the Economic Opportunity Act, young people have been employed through work-training programs and work-study programs as addes in school libraries to process instructional materials and do other clerical work.

7. 0

Rhode Island. Under the Vocational Education Act which provides funds for instructional materials, library facilities, and services in secondary schools, vocational school libraries have received materials. Schools receiving funds under School Assistance in Federally Affected Areas have purchased school library materials.

South Carolina reported that many school librarians attended institutes for school library personnel and educational media specialists authorized under NDEA Title XI. School librarians from many States have attended TITLE XI institutes.

Service to Handicapped Children

Under the ESFA Title II program, instructional materials were made available to handicapped children enrolled in regular public and private elementary and secondary schools which either comply with the State compulsory attendance laws or are recognized by some other procedure customarily used in the State, according to the relative need of children and teachers for instructional materials. Also, instructional materials may be made available, according to need, to handicapped children in special schools for the mentally or physically exceptional, where education equivalent to that of the public elementary or secondary school is provided.

A sampling of ESEA Title II State plans and annual reports, fiscal year 1966, indicates that the school library resources, textbooks, and other instructional materials provided under the program have contributed to the improvement of educational opportunities for handicapped children. A number of ESEA Title II State plans make specific provision for handicapped children, e.g.:

Arkansas set aside a proportion of the State allotment to acquire instructional materials for the use of children and teachers in schools operated by the State for blind, deaf, and mentally retarded children.

California reserved \$125,000 to provide textbooks for the use of visually handicapped children, grades 9-12.

Missouri set aside as a high priority in the allocation of instructional materials to schools with children and teachers in special instructional programs, large-type books for the partially sighted, and recordings for children with speech defects, etc.

North Dakota utilizes a Library Advisory Committee to assist in the development of criteria for the selection of instructional materials for the use of handicapped children.

d . . .

West Virginia established special curriculum needs for educational programs for handicapped children as a priority for the use of allocations made to local education agencies.

In Wisconsin, any division or agency of the State Government, any County Handicapped Children's Education Board, or the Milwaukee County Board of Public Welfare, having children in their custody for educational purposes, may make application to the Wisconsin State education agency for an allocation of funds under the Title II program.

Instructional materials for the use of handicapped children have also been provided in some States through special-purpose grants under the ESEA Title II program in fiscal year 1966, e.g.:

Los Banos, Merced County, Calif., plans a special collection of school library resources for the use of visually handicapped children.

The Jackson-Hillsdale Intermediate School District in Michigan will develop an instructional materials center, emphasizing special education materials for the use of children, teachers, and parents.

A large professional reference library is being developed for use of 20,000 children and teachers served by the Board of Cooperative Educational Services, First Supervisory District, Suffolk County, N.Y., giving special emphasis to professional materials concerned with the education of handicapped children, the mentally retarded, and emotionally disturbed children.

At the Kensington Elementary School, Jackson County, Kansas City, Mo, seven special classes (two for neurologically impaired children and five for mentally deficient children) have been provided with perceptual training materials, and speech- and language-development materials.

A library of supplementary science materials is being developed by the Board of Cooperative Educational Services, Third Supervisory District, Suffolk County, N.Y., for use with emotionally disturbed and brain-injured children.

The Cleveland State Hospital in Ohio, with an ungraded educational program for 29 emotionally disturbed children and 5 teachers, is utilizing instructional materials to provide a supplementary library service and enrichment program.

The Northridge Local School District, Dayton, Ohio, is developing a collection of library materials for use in one primary, two intermediate, two junior high, and two high school special education units.

IV. DEMONSTRATION CENTERS AND SPECIAL-PURPOSE GRANTS

A MAJOR PROVISION in the administration of the Title II program requires that the State plan set forth criteria for the allocation of school library resources, textbooks, and other instructional materials provided under the title among children and teachers in elementary and secondary schools. Section 117.3 of the Regulations requires that the criteria establish, on the basis of a comparative analysis and the application of standards, the relative need of children and teachers for school library resources, textbooks, and other instructional materials. The criteria established should include priorities for the provision of such materials on the basis of factors such as degree of economic need, quality and quantity of such materials now available, requirements of children and teachers in special instructional programs, and degree of previous and current financial efforts for providing such materials in relation to financial ability.

In implementing the factor concerned with requirements of children and teachers in special instructional programs, a number of States have included in their relative need formulas, provision for the development of a limited number of model public school libraries or instructional materials centers to demonstrate good instructional materials practices, or for a limited number of special-purpose grants to provide instructional materials for the use of children and teachers in special instructional programs. These States expect the centers and programs will not only serve the children and teachers in the schools concerned, but will also provide the stimulus for the development of adequate school library and instructional materials programs throughout a State and deepen understanding of the role of instructional materials in education by providing school board members, administrators, teachers, librarians, and lay groups with the opportunity to observe superior programs.

Table 13 provides data on 17 States where special projects have been funded. Although these data are incomplete, it is estimated that more than 150 special projects in these States were funded, with expenditures for the materials acquired totalling an estimated \$5 million. The following sections describe more fully the program in 6 States.

Pilot Project School Libraries in California

In fiscal year 1966 grants were made to provide materials to children and teachers in 48 public schools to aid in the development of school libraries or instructional materials, centers to serve as models for other schools in California. Selection of the schools enrolling children and teachers for whom the grants were made was based on their promise of rapidly reaching national school library standards through a combination of district effort and Federal grants.

 $[\]frac{1}{2}$ Not reported.

The purposes of these projects, as outlined in the 1965-66 regulations for the ESEA Title II program in California were:

- 1. To demonstrate the value of an effective school library and/or instructional materials center serving children and teachers in a single attendance center
- 2. To provide school libraries and/or instructional materials centers in various/areas of the State which are easily accessible to school board members, administrators, teachers, student teachers, and lay a groups who wish to observe a superior instructional materials program in action.
- 3. To demonstrate and evaluate new concepts in the use of instructional materials in the teaching program.

Various aspects of instructional programs were emphasized in these special projects in California, as the following examples show:

Team Teaching. - Library and Audiovisual materials are used at Parsons Elementary School, Enterprise Elementary School District, Shasta County, in a new Social Studies and English classroom complex, with two central rooms designated as library stations. Teachers and library staff will work as a team and coordinate students' work carefully.

Independent Study. - Emphasis was given to strengthening collections of audiovisual materials, as well as materials of all types in special subject areas available to children and teachers in Poway High School, Poway Unified School District, San Diego County. Independent study, requiring access to a wide variety of resource materials to meet individual needs, is the cornerstone of the school program.

Strong Faculty Support. - An exemplary school library is being established in Rio Linda Elementary School, Rio Linda Union School District, Sacramento County, where strong faculty support was enlisted to select materials with consideration for needs and interests of pupils and teachers. Orientation for the faculty in use of materials is provided.

Improved Learning Conditions. - Audiovisual materials, including a basic collection of periodicals on microfilm were added to the materials available to pupils in Sonora Union High School, Sonora Union High School District, Tuolumne County. A duplicate reference collection was placed in study centers for improved learning conditions there and in the Library.

Attitudes Toward Learning. - Teachers, administrators, and kibrary staff of the Fred H. Rohr Elementary School, Chula Vista School District, San Diego County, have noted a positive change in attitude of children toward books and the library. This exemplary instructional materials center is open before and after regular school hours for filmstrip viewing, listening to recorded material; and using other printed and audiovisual materials.

Information Retrieval. - Recorded information, both disc and tape, is available to students using individual study stations in the Los Banos High School Library, Los Banos Unified School District, Merced County. Students have access to learning media in a wide variety of forms.

Demonstration School Libraries in Kansas

Four Kansas public schools enrolling children and teachers eligible to participate in the ESEA Title II program were selected in fiscal year 1966 to serve for a period of 2 years as demonstration libraries. The \$100,000 reserved for the acquisition of materials in these schools was used to bring collections of school library resources up to national standards. The intent of the program is to demonstrate the impact on a school of a good library program administered by a creative librarian who has access to an abundance of library materials to work with students and teachers. Brief descriptions of the programs in the four schools follow:

Inservice Library Training for Teachers. - Service to children and teachers in Highland Park School, Topeka, includes preparation of bibliographies of instructional materials that are varied and effective in bringing results. Inservice library training for teachers is provided during orientation programs and the library staff takes the initiative in offering service to instructional programs.

Support for Curriculum Change. - The special grant provided instructional materials to support a curriculum change, that of providing a complete materials collection for an independent study program in Medicine Lodge High School. Revised courses of study incorporate use of new materials, including developmental reading for small groups of pupils with reading problems.

Instruction in Study Skills. - A high level materials collection is utilized by teachers, librarians, and media specialists of Prairie School, Prairie Village, to instruct students in study skills, to encourage curiosity, and develop independence in the use of information in many forms.

Guidance in Listening and Viewing. - Materials for use in study carrels wired for Fistening and viewing provide an opportunity for children in Buckner Elementary School, Wichita, to do independent study. Library paterials are available for use two evenings each week.

Special-Need Grants in Missouri

The Missouri State plan for ESEA Title II provided through the relative need criteria that 10 percent of the State allotment be reserved to help meet special needs of children and teachers in public and private elementary and secondary schools. Local education agencies were invited to submit applications for the special needs grants on the basis of three priorities:

(1) For children and teachers with unusual needs for instructional materials to improve the quality of their educational program where these needs cannot be met due to a pressing financial situation; (2) For children and teachers having a special need for materials of a type that cannot be adequately

supplied, e.g., large-type books for partially sighted, books of high interest and low reading level for remedial classes, recordings for speech-defectives, and enrichment materials for gifted children; (3) For children and teachers with special needs due to the establishment of an educationally innovative program. Brief descriptions of several interesting projects funded in fiscal year 1966 follow:

Listen In. Students of Notre Dame High School, Lemay, were loaned recordings, tapes, and films, for use in structured study in listening to a writer's means of expression in order to improve style and fluency in composition.

Remedial Reading, - High-interest, low-vocabulary instructional materials were made available for the use of students enrolled in the reading clinic of Normandy School District, St. Louis County.

Music Resource Centers. - Recordings and other materials useful in teaching music to elementary school pupils were made available through four centers in Ferguson School District, St. Louis County.

Demonstration School Libraries in North Carolina

In fiscal year 1966 under the ESEA Title II program, \$75,000 was reserved for the enrichment of school library resources in a limited number of existing quality public school libraries. The purpose of the 10 projects funded was to develop a number of exemplary school library programs throughout the State to serve as demonstration centers. It is hoped that school personnel and interested citizens who visit these centers will, through obsering effective library programs in action, gain ideas for improvements which may be made in their own school library services and facilities. Brief descriptions of the programs serving children and teachers in three of the demonstration schools receiving special grants in fiscal year 1966, follow:

Learning Resources Library. - A program is planned emphasizing independent and individual student use of newer addiovisual materials; microfilm, transparencies, tapes, 8-mm films at Lexington Lumior High (Middle) School. The library is the fulcrum of the school with areas for reference and recreational reading, conferences, seminars, exhibits, and carriels for independent study, listening, and viewing.

Audiovisual Materials for Home Use. - A wide variety of printed and audiovisual materials are available to pupils and teachers in North Moore High School at Robbins. Filmstrips and viewers may be borrowed for home use and independent use of library materials in many forms is emphasized.

Understanding Art Concepts. - The demonstration project for pupils and eachers at Gentry School located at Erwin emphasized audiovisual materials, such as 8-mm single-concept films and art prints and slides. Teachers use these materials to help pupils understand a concept in art or to enhance a lesson in social studies or literature.

Libraries and Multimedia Projects in New York

In fiscal year 1966, the New York State Plan under ESEA Title II reserved 10 percent of the State's allotment to develop outstanding public school libraries or instructional materials centers to serve the instructional needs of children and teachers in public and private schools. Thirty projects were selected for funding to serve as models and under terms of the grant may be visited by professional members of school staff upon request. Varying aspects of instructional programs are emphasized in the projects funded, as these brief descriptions show:

Social Studies Resource Library. - A great variety of multimedia social studies materials, including films, filmstrips, tapes, recordings, transparencies, slides, programed materials, pictures, periodicals, and books were placed in a departmental library adjacent to the Union-Endicott High School Library to serve as independent study program. Teachers received orientation in making the most efficient use of materials.

Elementary Science Instruction. - Kits of multimedia materials based upon the suggested major divisions outlined in the New York elementary science guide have been developed and will be made available for circulation to schools from Niagara-Wheatfield Central School.

Inservice Education in Modern Mathematics. - An instructional materials center established by Board of Cooperative Educational Services, Allegany County, will emphasize teacher training in modern mathematics. Single concept films on a variety of subjects will be purchased.

Curriculum Materials Center. - A curriculum materials center established by the Patchogue-Medford Public Schools serves 9,500 children and teachers through provision of a model book collection, professional books, and periodicals, microfilms, recordings, art prints, and other materials. Messenger delivery service is supplied for schools in the area.

Microfilm Collection. - A microfilm collection of 24 key periodicals is available to assist students and teachers in the Forestville Central School in individual research.

Art and Humanities. - Books, slides, films, recordings, filmstrips, and prints are available to pupils and teachers of Manhasset Public Schools for a pilot program for cultural enrichment in the field of art in connection with an outstanding humanities project.

Special Purpose Grants in Ohio

Ten percent of Ohio's allocation of funds under ESEA Title IF was reserved for special-purpose grants to encourage the establishment of special collections of books and materials to meet special curriculum needs. These grants were used in 19 Ohio school districts for a variety of purposes, e.g., to provide instructional materials for emotionally disturbed children in an ungraded academic program in a hospital, to establish a special collection of science materials in an elementary school; and to serve children and

teachers in a small rural school with enrichment materials in the fields of history, geography, literature, and art. Following are brief descriptions of some selected projects funded in Ohio for fiscal 1966.

English-Social Studies Block. - Instructional materials supporting the study of Asia and Russia in a depth study of the non-Western world bugh a language arts and social studies block of instruction were made available to seventh-grade pupils and teachers in Rocky River Junior High School.

Earth Science. - Instructional materials to support a specialized area in the study of earth science at the ninth-grade level were provided for the use of pupils and teachers of Maple Heights City School District.

Communicative Arts. - Students and teachers of Solon Local School District were loaned materials to support the various disciplines of literature, language, history, philosophy, art, music, and science in a team-teaching program developed in the area of communicative arts.

Outdoor Laboratory. - A special collection of materials emphasizing biology, nature study, ecology, and conservation is available to South Central District, Local School Greenwich, Ohio, pupils utilizing outdoor laboratory facilities for studies in science, vocational agriculture, and geography.
